

THE MARINE CARD ACCESS MANAGEMENT SYSTEM

The Marine Card Access Management System (AMS) is now live. The System has been extensively tested and refined in the field as part of a collaborative development program involving leading marinas, boat yards, and yacht clubs.

Aimed to reduce the “human effort” of compliance for both contractors & facility operators by 90%, the AMS automates and streamlines access management through a tablet-based sign-in process, and a sophisticated yet simple back-end provides control and oversight for the venue.

Efficient, neat, and highly effective, the System replaces contractor register and key-log books, ring-binders full of documents, and excel spreadsheets – as well as the work of maintaining and monitoring these.

The AMS interacts with the Marine Card web-system, locally processing cloud based data from individual Card-holder profiles. On entry to the venue, the contractor or his dependent staff simply tap into the AMS touch-screen their Marine Card number and PIN. Where the information on the Card-holder’s profile meets the access metrics set by the Venue Administrator (eg: insurance value & currency), workers are automatically logged into the venue.

The optional easy-care printer dispenses a personalised high-viz wristband to each individual on successful log-in, so venue staff can quickly identify those who have properly registered onto the site - better targeting the compliance effort for venues, and making life easier for contractors who do the right thing. Workers logging out of the venue simply reverse the sign in process at the tablet, and an automated SMS prompt can be sent to contractors on site as closing time approaches.

Once the employer or head-contractor’s web-profile is up to date with contact, insurance, and dependent worker information, he and his personnel can access participating venues seamlessly, and without the requirement for continual updating of paper staff-lists and insurance documents previously needed at each individual venue.

The Marine Card web-system alerts contractors when insurance documents are due to expire, so staying up to date is a breeze. Venue Administrators use a simple document validation process to ensure ongoing insurance coverage, and integrity of key information.

The Venue Administration Interface provides a clean visual overview of contractor and visitor activity on site. A suite of notification and reporting options support effective administration, record-management, and security, whilst the phone and tablet versions put venue monitoring information resources within easy reach from any web-connected device – remote from the venue, or out and about on the marina.

Promising to revolutionise boating industry access management, **the Marine Card Access Management System is available for subscription now.** Please contact us to discuss implementation at your facility.
