|        | Quarterly Detail |            |             |

| Tasks                | Action                                      | Completed |
|----------------------|---|-----------|
| Degrease and remove  | Degrease covers whilst on vessel            |           |
| covers using Magic   | using Magic Sponge, chammy                  |           |
| Sponge               | dry and stow in safe place (away            |           |
|                      | from waters edge or wind)                   |           |
| Degrease hard top or | Set up harness and safely stand             |           |
| bimini               | on hard top or vantage point to             |           |
|                      | Degrease Bimini. Ensure                     |           |
|                      | underside of domes and radar                |           |
|                      | domes have been scrubbed.                   |           |
|                      | While up on hard top, high                  |           |
|                      | pressure wash nonslip and wash              |           |
|                      | stainless steel fittings with               |           |
|                      | StarClean                                   |           |
|                      | (all undersides of instruments and fittings |           |
|                      | that can be seen from below)                |           |
| Soap wash clears or  | Ensure clears are washed using              |           |
| windows/windscreens  | softwash tool or mitt. Ensure               |           |
|                      | the whole clears section has                |           |
|                      | been passed over with sort wash             |           |
|                      | tool (If windy or hot work small sections   |           |
|                      | to ensure soap doesn't dry on clears/glass  |           |
|                      | as this will leave bad stewaking)           |           |
| Degrease brows, side | When Degreasing the                         |           |
| windows and          | brow/superstructure and side                |           |
| superstructure       | windows ensure to soap                      |           |

|                        | ,   |  |
|------------------------|---|--|
|                        | between superstructure                        |  |
|                        | overhang and windows (salt builds             |  |
|                        | up in these areas, the salt cant be seen      |  |
|                        | from the outside but is very visible from     |  |
|                        | the inside)                                   |  |
| Move or lift Kayaks,   | When washing forward decks                    |  |
| Lilypads and all yacht | make sure all yacht toys have                 |  |
| toys off deck          | been lifted off the deck and soap             |  |
|                        | washed underneath (If toys are                |  |
|                        | salty, soap wash and notify us in             |  |
|                        | comments)                                     |  |
| Lift/open all deck     | Open all hatches and Degrease                 |  |
| hatches                | out gutters, drains and inside of             |  |
|                        | hatch lids (If scrubbing is required, use     |  |
|                        | magic sponge or scotch brite)                 |  |
|                        |   |  |
| StarClean Stainless    | Using a application pad, wash                 |  |
| bow rails and fittings | hand rails and fittings to remove             |  |
|                        | all pitting and Tea staining                  |  |
|                        | (Ensure to wash underside or rails and        |  |
|                        | inward side of fittings as rust usually hides |  |
|                        | in these areas)                               |  |
| Bleach non-slip High   | When high pressure washing                    |  |
| pressure wash          | non slip use orange broom head                |  |
|                        | (hard bristle) gurney and bleach              |  |
|                        | (blue bottle) carefully scrub                 |  |
|                        | nonslip and keep all surrounding              |  |
|                        | areas WET to prevent damaging                 |  |
|                        | covers etc                                    |  |
| Degrease Bulwarks, in  | Degrease bulwarks using soft                  |  |
| and out                | bristle brush. Be sure to check               |  |
|                        | all gutters and inside bulwarks               |  |
|                        | for grime build up. Usually                   |  |
|                        | black!  |  |
| Degrease sunroof       | Open sunroof and inspect                      |  |
| gutters                | gutters. Use a magic sponge                   |  |
| 0                      | J   |  |

|                       | and degreaser to clean grime            |  |
|-----------------------|---|--|
|                       | and chammy dry. (Note face of           |  |
|                       | sunroof will have grime and mould)      |  |
| Acid wash and         | Ensure all teak is completely           |  |
| brighten Teak deck,   | soaked, apply acid and work             |  |
| flybridge steps and   | across the grain of the teak.           |  |
| anchor hatches        | Once acid has completely                |  |
|                       | absorbed into teak use rinse            |  |
|                       | wand to remove ALL grey. Once           |  |
|                       | this is complete, use brightener        |  |
|                       | (Ensure there are no dark spots)        |  |
| Rust and stain remove | Walk around vessel and find any         |  |
| gelcoat around        | rust marks, mostly found around         |  |
| stanchions            | stanchions and stailess fittings        |  |
|                       | and spray with rust and stain           |  |
|                       | remover (open all hatches and hose out  |  |
|                       | all hatch gutters)                      |  |
| Chammy vessel         | Chammy clears, glass and                |  |
|                       | stainless steel using an                |  |
|                       | absorbent chammy first                  |  |
|                       | following by a finishing chammy         |  |
|                       | to ensure no water drops are            |  |
|                       | left behind                             |  |
|                       |   |  |
| Machine Wax Hard      | Set up harness and safely clip up       |  |
| Тор                   | extension lead. Machine wax all         |  |
|                       | smooth areas, domes, radar              |  |
|                       | bars and hatches. Wax all               |  |
|                       | stainless fittings. ( <b>Ensure all</b> |  |
|                       | wax has been removed, check             |  |
|                       | from all angles)                        |  |
